Elevator Pitch

Hi, I'm Shlok Bhakta, a Computer Science student at Texas A&M with a 3.8 GPA. I'm passionate about developing innovative software solutions that make a real impact. My experience includes building high-performance web applications, developing data visualization tools, and engineering custom computing systems.

What excites me about John Deere is your Smart Industrial strategy and commitment to solving global challenges through technology. I believe my technical skills in Python and Java, combined with my experience as a Teaching Assistant, make me an ideal candidate to contribute to your full-stack product teams.

I'm ready to relocate to either the Quad Cities or Des Moines area and am eager to help build the digital solutions that will support John Deere's mission of ensuring food security and infrastructure development for our growing world.
